LABS

LEAN DIGITAL WORKFLOWS
FOR INFRASTRUCTURE, POWER + COMPLEX OPERATIONS

OUR CORE PURPOSE

Empower. Innovate. Sustain.

Human-centered, lean digital workflows that enable innovation and create lasting impact.

DESIGNED FOR

Manufacturing
Infrastructure Sector
Power producers
EPC contractors
Public sector enterprises

WHY · OUR PURPOSE

A better tomorrow, built around people.

A future where technology makes complex work leaner, gives teams room to innovate, and helps them stand by decisions that create lasting impact.

We build intuitive digital workflows that give you the clarity to innovate, confidence to stand by your choices and tools to create lasting impact.

CLARITY TO ACT.
CONFIDENCE TO DECIDE.
ROOM TO INNOVATE.

VALUES

FOUR COMMITMENTS BEHIND EVERY SYSTEM

01
Lean software. Deep care.
Intentional craft. Less bloat.

02
Clarity in complexity.
Structure teams can understand.

03
Efficiency meets empathy.
Protect time, attention and energy.

04
Value that matters.
Add useful value to the work.

Welcome home.

Let's build something meaningful, together.

DESIGNED FOR

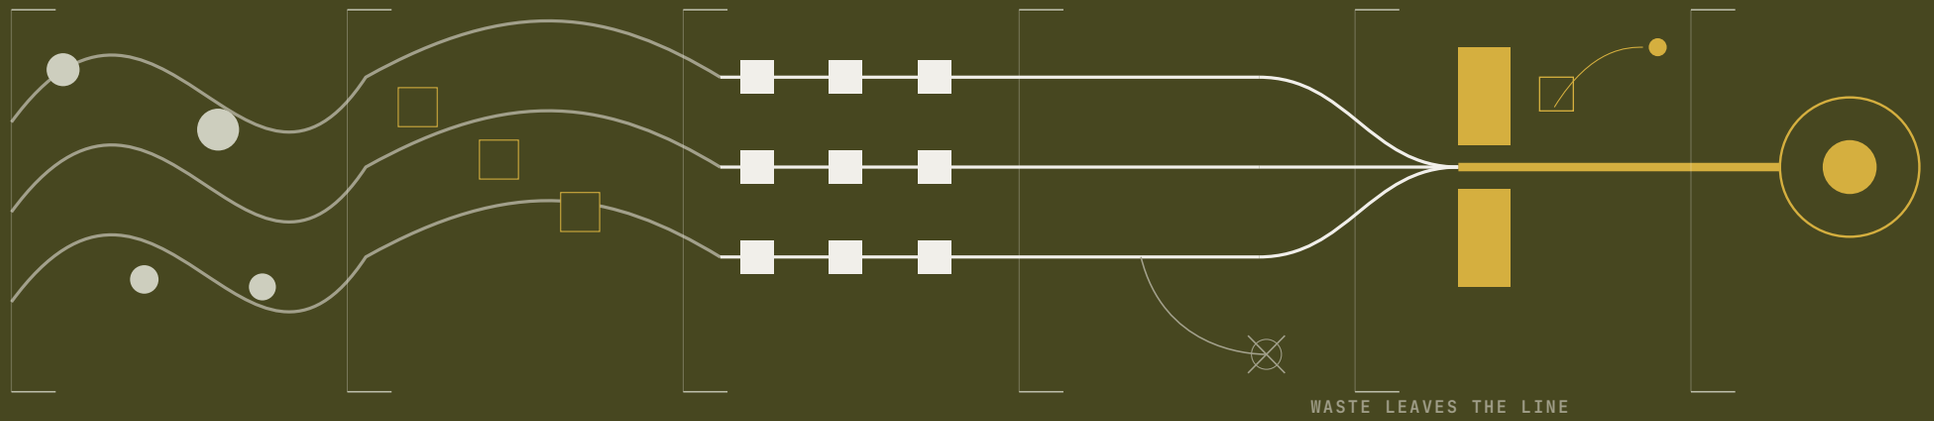

Manufacturing · Infrastructure Sector · Power producers · EPC contractors · Public sector enterprises

HOW · THE LEAN METHOD

Complex operations. Lean digital workflows.

SIX MOVES · ONE CONTINUOUS METHOD

We transform complex operations into lean digital workflows by removing friction, improving efficiency and making decisions easier to audit, explain and defend.

01 / GEMBA

See the real work.

Start where the work is done, with the records it already produces.

02 / VSM

Map the value.

Every step from input to sign-off, drawn as it actually runs.

03 / STANDARD WORK

Repeat what works.

The current best way, written down, then repeated by the system.

04 / MUDA

Remove the waste.

Activity that consumes time and adds no value is taken out.

05 / POKA-YOKE

Catch errors early.

A check that makes the wrong result impossible to pass downstream.

06 / JIDOKA

Keep people in control.

The system raises the problem and calls a person, and every decision is auditable from input to sign-off.

FIND THE FRICTION. CHANGE THE FLOW. CATCH THE ERROR EARLY.

SYSTEM 01 · PRE-AWARD TENDER REVIEW

PCI

See the risk before you bid.

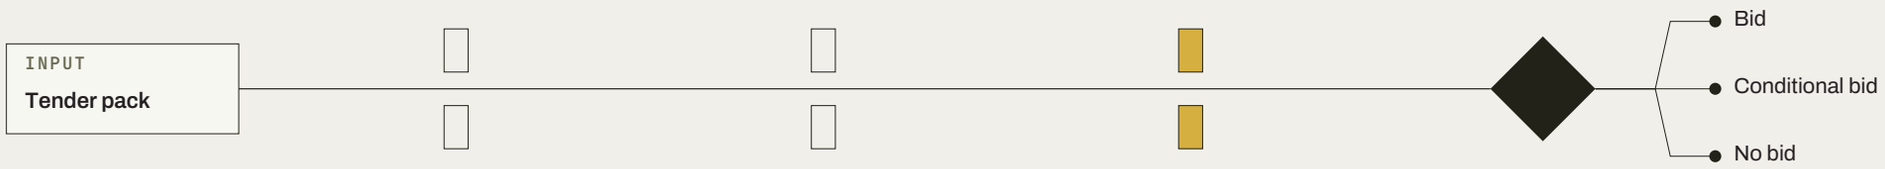

Bring the tender pack into one review. Find contractual exposure, prepare deviations and pre-bid queries, and give the bid team a clearer basis for its decision.

PIPEWORK AND MACHINERY · STOCK PHOTOGRAPH NTS

DRAWN AS IT RUNS

INPUT · THREE GATES · DECISION

THE LINE IT WON'T CROSS

Unverified is a gap. Never compliance.

A clause the extraction cannot verify against the source is counted as a gap, never as compliant.

9 CLAUSE GROUPS

Every pack is read against the same catalogue across six contract types, so coverage does not depend on who ran it.

0 API KEYS REQUIRED

Runs with on-device lexical retrieval and no model key; a language model is optional.

SYSTEM 02 · SITE SAFETY AND PERMITS

Sentinel

Observe. Ground. Act.

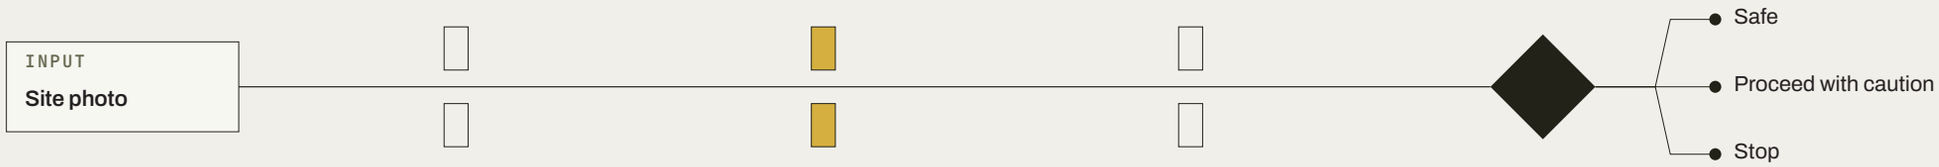

Turn a site observation into a structured hazard report, retrieve cited countermeasures and review permit controls with the evidence in view.

SCAFFOLD AROUND A COLUMN · STOCK PHOTOGRAPH NTS

DRAWN AS IT RUNS

INPUT · THREE GATES · DECISION

THE LINE IT WON'T CROSS

Below the floor, no generated answer.

Below a grounding score of 30 out of 100, Sentinel returns the sources it found and does not generate an answer.

30/100 GROUNDING FLOOR

Below it, Sentinel returns "insufficient sources" instead of an answer.

21 HAZARD AND WASTE TYPES

Thirteen hazard types and eight Lean waste types anchor classification and reporting.

SYSTEM 03 · LABOUR COMPLIANCE · MONTH-CLOSE

Labour

Close the month. Keep the record.

Collect contractor records, reconcile wages and contributions, and bring proposed reminders, notices and updates to a person for approval.

AT THE WORKSITE · STOCK PHOTOGRAPH NTS

DRAWN AS IT RUNS

INPUT · THREE GATES · DECISION

GATE 01
Collect
Single-use link per contractor and month.

GATE 02
Reconcile
±2% on wages and contributions.

GATE 03 · THE RULE
Approve
Agents can only propose.

DECISION
Approval

THE LINE IT WON'T CROSS

Agents propose. A person approves.

The agents can only queue proposals.

0
CHANGES APPLIED WITHOUT APPROVAL
Agents queue proposals; only a person's decision applies one.

±2%
RECONCILIATION TOLERANCE
On wages and contributions against the attestation; headcount must match exactly.

SYSTEM 04 · PROJECT CORRESPONDENCE

NexusRef

Every message. In its place.

Bring mail, letters and attachments into a connected project record. Preserve the filing context, the formal reference and each identifiable revision.

PROJECT DOCUMENTS WITH THE SITE TEAM · STOCK PHOTOGRAPH NTS

DRAWN AS IT RUNS

INPUT · THREE GATES · DECISION

THE LINE IT WON'T CROSS

Uncertain filing is marked for triage.

Classification without a folder, or with confidence below 0.4, is marked for triage.

0.4 CLASSIFICATION TRIAGE FLOOR

A missing folder or classification confidence below 0.4 is marked for review.

vN REVISION SUFFIX

Formal references carry the tenant, project, type, year, sequence and version.

SYSTEM 05 · CONTRACT RISK REVIEW + CLAIMS

OneLegal

Know the risk. Build the claim.

Run the contract through a playbook of 301 questions. Every answer is cited to its clause and every clause is scored against a market baseline. When a claim follows, notices and a Statement of Claim draft from evidence counsel has sealed.

DRAWINGS AND SKETCHES ON THE DESK · STOCK PHOTOGRAPH NTS

DRAWN AS IT RUNS

INPUT · THREE GATES · DECISION

INPUT
Contract set

GATE 01
Playbook
11 contract families · 301 questions.

GATE 02
Risk matrix
Each clause 1–5 against a market baseline.

GATE 03 · THE RULE
Seal
SHA-256 manifest before drafting.

DECISION
Remedy route
- Notice
- Statement of Claim

THE LINE IT WON'T CROSS

Unsealed evidence. No draft.

Drafting refuses to run over an evidence set that has not been sealed.

301 PLAYBOOK QUESTIONS

Across eleven contract families, each scored against its own market baseline.

START · FIXED SCOPE · FIXED FEE

Start with one document.
